License

You're using Easy WP SMTP Lite - no license key required. Enjoy!

Unlock more features by [upgrading to PRO](#).

As thanks for being an Easy WP SMTP Lite user, we're offering you **50% off**, applied automatically at checkout.

License Key

Paste license key here

Connect

Already purchased? Simply enter your license key above to connect with Easy WP SMTP Pro!

Mailer Settings

Choose a mailer or use an SMTP server. If you'd like a guided setup, run through our [Setup Wizard](#).

Don't see what you're looking for? [Suggest a mailer](#).

| | | | |
|---|-----------------------------|------------------------------|----------------------|
| SendLayer RECOMMENDED | aws PRO | Brevo | Elastic Email |
| Google PRO | SINCH Mailgun | SINCH Mailjet | mailersend |
| MANDRILL | PRO | Postmark | Resend |
| SendGrid | SMTP | SMTPGO | SPARKPOST |
| ZOHO PRO | Other SMTP | php Default (none) | |

Other SMTP

By selecting the Other SMTP option, you can connect your site to an SMTP server you have access to instead of sending emails through a 3rd party provider. In some cases, this may be more convenient than setting up an account with one of the other mailer options provided. However, the Other SMTP option is less secure than the other mailers. Additionally, your provider may not allow you to send large volumes of emails. For these reasons, we recommend choosing one of our compatible mailers.

To get started, [see our documentation for the Other SMTP mailer](#).

SMTP Host

smtp.gmail.com

Your mail server's address.

Type of Encryption

None SSL TLS

If your SMTP provider offers both SSL and TLS encryption, we recommend using TLS. For most servers, this is the more secure option.

SMTP Port

587

The port to your mail server.

SMTP Authentication

ON

Enable mail server authentication. This option should be enabled in most cases.

SMTP Username

sonali.gorai@teampumpkin.com

The username to log in to your mail server.

SMTP Password

Remove Password

The password to log in to your mail server. The password will be encrypted in the database.

General Settings

From Email Address

The email address that emails are sent from.

Please note that other plugins can change this. Enable the Force From Email setting below to prevent them from doing so.

Force From Email

If enabled, your specified From Email Address will be used for all outgoing emails, regardless of values set by other plugins.

From Name

The name that emails are sent from.

Force From Name Replacement

If enabled, your specified From Name will be used for all outgoing emails, regardless of values set by other plugins.

Advanced Settings

HIDE

Backup Connection

[Upgrade to Pro](#)

Avoid the risk of losing emails by adding an additional connection and setting it as your Backup Connection. Should the Primary Connection fail to send an email, the Backup Connection will take over. [Upgrade to Easy WP SMTP Pro.](#)

Backup Connection

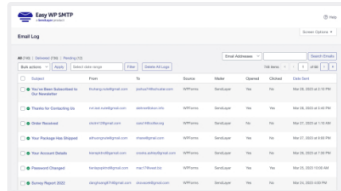

None

Once you add an [additional connection](#), you can select it here.
